## 1 Model Description

**Fig. 1:** Sample Figure Inclusion.

Provide a brief introduction to the material being discussed in this report. For example, include what the motivation is, maybe provide a supportive figure such as Figure 1, reference earlier work if needed in a literature review. Describe the module including mathematics, implementation, etc.

## 1.1 Equations

Equations are centered with the equation number flush to the right. In the text, these equations should be referenced by name as Eq. (1) or Equation (1) (e.g., not eq. 1, (1), or Equation 1).

$$a = b^2 \tag{1}$$

## 1.2 Citation

The citation of bibliographical references is indicated in the text by superscripted Arabic numerals, preferably at the end of a sentence. This is the default style included in this report L<sup>A</sup>T<sub>E</sub>X class.<sup>1</sup>

References listed at the end of the paper are indicated in the text by a superscript Arabic number. If this causes confusion in mathematics or if a superscript is not appropriate for other reasons, this can be expressed as (Ref. 1).

## 1.3 Figures

Illustrations are referred to by name in the text as Figure 1, Figure 2, etc., or, Figures 3 and 4 (e.g., not figure 1, Fig. 1, or *Figure* 1). Captions are in title case (miniscule lettering with the first letter of major words majuscule); they are 10-point serif font and centered below the figure as shown in Figure 1. Each illustration should have a caption unless it is a mere sketch. An explanatory caption of several sentences is permissible. Each included illustration must be called out (mentioned) in the text. Ideally, figures should appear within the text just before they are called out.

The figure files (PDF preferred) should be stored in a common “Figure” sub-folder. If available, any drawing documents used to create this figure can be stored in a “Support” sub-folder.

## 1.4 Tables

Tables are referred to by name in the text as Table 1, or, Tables 2 and 3 (e.g., not table 1, Tbl. 1, or Table 1). The title is centered above the table, as shown in Table 2. The minimum number of lines needed for clarity is desired. The table font may be adjusted smaller than the body text as necessary.

**Table 2:** A Caption Goes Here

Animal	Description	Price (\$)
Gnat	per gram	13.65
	each	0.01
Gnu	stuffed	92.50
Emu	stuffed	33.33
Armadillo	frozen	8.99

## 1.5 Mathematical model

There can be subsections, like this one.

### 1.5.1 Gravity models

Even subsubsections.

## 2 Model Functions

This section will contain a bullet-list and descriptions of what functions this module performs. For example:

- **Calculate A Thing:** This model calculates a thing with great precision
- **Communicate Something:** This model interfaces with X, Y, and Z via the messaging system.

### 3 Model Assumptions and Limitations

This section should describe the assumptions used in formulating the mathematical model and how those assumptions limit the usefulness of the module.

### 4 Test Description and Success Criteria

Describe the unit test in here.

#### 4.1 Check 1

There could be subsections for various checks done within the unit test.

### 5 Test Parameters

Test parameters and inputs go here. I think that success criteria would work better here than in the test description section. Basically, describe your test in the section above, but put any specific numbers or inputs to the tests in this section.

### 6 Test Results

The results of the unit test should be included in the documentation. The results can be discussed verbally, but also included as tables and figures.

#### 6.1 Unit Test Table Results

To automatically create a unit test table to include in the documentation, use the command:

```
unitTestSupport.writeTableLaTeX(  
    tableName,  
    tableHeaders,  
    caption,  
    dataMatrix,  
    path)
```

#### 6.2 Unit Test Figure Results

If figures and plots are generated in the python unit tests, these can be also automatically included in the unit test documentation. This is achieved with the command:

```
unitTestSupport.writeFigureLaTeX(  
    "testPlot",  
    "Illustration of Sample Plot",  
    plt,  
    "width=0.5\\textwidth",  
    path)
```
